Growing your world. Saving ours.

bamboo flooring

Plantation grown bamboo saves our ancient forests and creates a breathtaking alternative to hardwoods. Stronger and more resilient than many native and rare woods but with the same look and feel, bamboo flooring comes pre finished in matt, semi-gloss or gloss for easy installation. And it has the most wonderful natural warmth that you can't help but notice.

Why bamboo?

- Environmentally sustainable - bamboo flooring is an attractive alternative to wood floors, and is a product derived from the forests of a fully sustainable, environmentally friendly and rapidly growing renewable resource.
- Easy installation
- Coupled with its price advantage, bamboo products are creating significant interest for their aesthetic and other performance qualities over existing hard wood alternatives. And bamboo provides a highly competitive commercial product.
- Very stable under humid and dry conditions
- Bamboo is abrasion resistant and has excellent horizontal surface friction (non-slip)
- Bamboo is allergy free
- Boards are sealed and glued with non toxic glues
- Bamboo is colour fast as it is not surface stained but consistent through to the core
- High UV resistance, blocking the sun's harmful rays and protecting the floor pattern from fading over time
- Easy cleaning, since bamboo flooring doesn't trap dirt. Most spills can be cleaned up with a mop or sponge.
- Very low emissions through waste and pollution
- Endless design options
- Very hard timber alternative (janka rating of between 8kN and 15.3kN)
- Tongue and grooved on 4 sides for stable, flat and even surface
- Bamboo timber flooring is retardant against termites, fire, sunlight, chemical, stains, scuffing and indentation
- The natural beauty and durability of bamboo flooring far surpasses traditional hardwood floors

STYLEBOARD™ STRAND WOVEN BAMBOO SPECIFICATIONS

Colours: STYLEBOARD™ is available in natural and coffee colours

Sizes: Standard - 1830mm(l) x 96mm(w) x 12mm/14mm(t)
